We *keep, observe,* or *celebrate* a festival; we *keep* or *hold* a prisoner in custody; we *keep* or *preserve* silence, *keep* the peace, *preserve* order—*preserve* being the more formal word; we *keep* or *maintain* a horse, a servant, etc.; a man *supports* his family; we *keep* or *obey* a commandment, *keep* or *fulfil* a promise. ◆ **leave, let** *Leave* and *let,* often confused, are not synonyms. *Leave* means to go away or depart, *let* to permit. Perhaps because the noun *leave* has "permission" as one of its meanings, popular usage endows the verb *leave* with the sense "permit," and tries to make it interchangeable with *let* in such expressions as *Let me go.* But the substitution of *leave* for *let* violates established idiom, for while *let* can be followed by the infinitive without "to," *leave* cannot: *Leave it to him to decide* or *Leave the decision to him,* but never *Leave him decide. Leave me go* is readily recognized as violating both sense and idiom, and is hence considered illiterate. So with *Leave me be.* This last is synonymous with *Leave me alone,* widespread in children's speech as a replacement for the standard English *Let me alone,* which has the idiomatic meaning "Don't bother me" or "Stop bothering me." In this case, and in this case only, *Leave it alone* may be regarded as having acquired fair colloquial standing, with two reservations. It is only in the imperative that *leave* is here admissible as a substitute for *let*; in declined forms, the idiomatic sense does not carry over. *They left him alone* does not mean *They let him alone.* The second reservation follows from this. In formal English, *Leave me alone* means "Go away so that I may be alone." Solitude may insure freedom from annoyance, but asking *to be left alone* is not the same as demanding *to be let alone.*

• **like, as, as if** *Like* is unacceptable as a conjunction at the formal level of writing, where factual clauses of comparison are introduced by *as*, contrary-to-fact ones by *as if* with the subjunctive. At the informal level, because it signals a coming comparison much more strongly than the rather neutral *as*, *like* is in widespread use. It has good colloquial standing, except with die-hard sticklers for correctness, in idiomatic expressions where it serves both as an adverb to round out a phrasal verb, and as a conjunction governing a finite verb: It looks *like* we're in for trouble; It sounds *like* a train's coming, and I'll have to run for it. In the last, the almost imperceptible gradation from the formally correct *That sounds like a train coming* to the informal *It sounds like a train's coming* shows why any ironclad prohibition of *like* as a conjunction at the informal level is ill-advised. The effort to ban it has frightened the timid into substituting *as* for *like* in adjectival or prepositional uses where *like* is idiomatic. Nor has the attempted ban deterred novelists and playwrights, whose trade demands a good ear for the way people actually speak, from representing their literate characters as making rather free use in dialog of *like* as a conjunction, usually, however, with a regard for idiom.

-like *suffix of adjectives* Resembling or similar to: *childlike, wavelike.* [<LIKE]

A thing is *presumable* which, from what is known, may be taken for granted in advance of proof. *Reasonable* in this connection signifies such as the reason can be satisfied with, independently of external grounds for belief or disbelief. me (mē) *pron.* The objective case of *I*.
◆ **It's me, etc.** Anyone who answers the question "Who's there?" by saying "It's me" is using acceptable colloquial idiom. Here *It is I* would seem stilted, although at the formal level of writing it is expected: They have warned me that *it is I,* and not he, who will have to bear the brunt of the criticism. After a finite impersonal form of the verb *to be,* as *it is, it was,* etc., a personal pronoun should, according to prescriptive grammar, be in the same case as the subject: the nominative; accordingly, at the formal level, we find *It is he, It is we, It is they,* etc. Since only the personal and relative pronouns retain different inflected forms for the nominative and objective cases, the rule might appear to be invented to cover this one exceptional situation. The normal subject-verb-object order of the English sentence creates a strong expectation that what follows the verb will be in the objective case, and perhaps for this reason popular usage has long favored *It's me* over the formal *It is I.* British and American playwrights in recent years have also represented their characters, and not only the uneducated speakers among them, as saying *It's him, It's her, It's them,* etc. In spite of the exact parallel in construction with *It's me,* these expressions are not yet condoned to the same extent, even at the colloquial level.

Synonyms (noun): brain, consciousness, disposition, instinct, intellect, intelligence, reason, sense, soul, spirit, thought, understanding. *Mind* includes all the powers of sentient being apart from the physical factors in bodily faculties and activities; in a limited sense, *mind* is nearly synonymous with *intellect,* but includes *disposition,* or the tendency toward action, as appears in the phrase "to have a *mind* to work." The *intellect* is that assemblage of faculties which is concerned with knowledge, as distinguished from emotion and volition. *Understanding* is chiefly used of the reasoning powers: the *understanding* is distinguished by many philosophers from *reason* in that *reason* is the faculty of the high cognitions or a priori truth. *Thought,* the act, process, or power of thinking, is often used to denote the thinking faculty, and especially the *reason.* The *instinct* of animals is held to be of the same nature as the *intellect* of man, but inferior and limited; yet the apparent difference is very great. Human *instincts* denote tendencies independent of reasoning or instruction. As the seat of mental activity, *brain* is often used as a synonym for *mind, intellect, intelligence. Sense* is used as denoting clear mental action, good judgment, acumen; as, He is a man of *sense,* or, he showed good *sense. Consciousness* includes all that a sentient being perceives, knows, thinks, or feels, from whatever source. See GENIUS, SOUL, UNDERSTANDING. *Antonyms*: body, brawn, matter.
